Tangen-Pro series

Tangential Double-Sided 4-Corner Shoulder Milling Tool

- High depth-of-cut (up to 12mm) shoulder milling by high helix chip-breaking double-sided inserts
- Enhanced productivity through strong clamping force of the tangential type and multi-insert application

Tangential Double-Sided 4-Corner Shoulder Milling Tool

TP4P (Tangen-Pro series)

Based on KORLOY's differentiated manufacturing technology, we have launched Tangen-Pro TP4P, a tangential double-sided and 4-corner shoulder milling cutter.

Generally, the tangential type makes it easier to secure chip pocket space compared to the radial type, offers excellent clamping stability, and enables multi-insert clamping for the same cutting diameter, resulting in improved productivity through high table feed rates.

TP4P is equipped with the advantages of the tangential type but also features a chip-breaking edge design that effectively reduces vibration and cutting forces, providing superior machinability. Its optimized wide base and side clamping structure maintain strong clamping force even in high-speed/high-feed machining, ensuring stable machining.

In addition, the combination with KORLOY's various specialized grades makes it applicable not only to steel and cast iron but also to various workpieces such as stainless steel and titanium alloys. It demonstrates outstanding performance, especially in roughing.

Thus, TP4P provides over 30% productivity improvement compared to the radial type through high speed / high feed machining by increasing table feed, stable clamping, and a chip-breaking edge.

» Excellent cutting performance

- Application of High Helix and Chip-breaking Chip Breakers

» Various holder lineup

- Enhanced adaptability through a diverse lineup of holders

» Stable clamping

- Ensures wide clamping side

» Excellent Economical Efficiency

- Up to 4 usable corners due to double-sided design

Code system

Cutter type (Single-edge)

TP4	P	C	M	063	R	-	22	-	6	-	LN13
TP4 (Tangen-Pro)	KAPR P: 90°	Type C: Cutter	Arbor M: Metric A: Inch None: Asia	Machining diameter 063: Ø63mm	Oil hole & hand R: With oil hole, right-handed NR: Without oil hole, right-handed				Internal diameter 22: Ø22 mm	No. of tooth 6: 6 tooth	Available insert LN13: LNGX13

Cutter type (Multi-edge)

TP4	P	C	M	050	M	-	22	-	4F	-	47	LN13

Shank type

TP4	P	S	032	R	-	3	W	32	-	110	-	LN13
TP4 (Tangen-Pro)	KAPR P: 90°	Type S: Shank	Machining diameter 032: Ø32 mm	Oil hole & hand R: With oil hole, right-handed NR: Without oil hole, right-handed			Shank type W: Weldon C: Cylinder	Shank diameter 32: Ø32 mm	Overall length 110: 110 mm			Available insert LN13: LNGX13

Features

Heat Dispersion

Chip Breaker Structure

- Installation of multiple dimples
- Prevents thermal cracks and Increases tool life

KORLOY Identity
symbol mark

Excellent Clamping Stability

- Ensures a large clamping surface area

High Depth-of-Cut Structure and Optimized Perpendicularity

- APMX 12 mm
- Perpendicularity within 30 μm

Reinforced Edge Geometry

- Double Negative-Positive Edge Structure
- Improves chipping resistance and Prevents from sudden breakage

Streamlined holder Structure

- Smooth chip evacuation

✓ Application and features of chip breakers

Chip breaker		Cutting edge	Application	Feature
ML			For HRSA and Titanium	Guarantees high quality of performance from applying suitable for low cutting resistance chip breaker for HRSA cutting and high hardness cutting edge
MM			For general cutting	Suitable for general cutting range from design structure for general high feed cutting

✓ Ramping and helical cutting

(mm)

Designation	DCX	APMX	Ramping		Helical cutting			
			RMPX(°)	LMIN	Min diameter (DHmin)	Max pitch	Max diameter (DHmax)	Max pitch
LNGX13	25	12	1.42	484	42	1.31	48	1.82
	32	12	0.9	765	56	1.18	62	1.5
	40	12	0.62	1,104	72	1.09	78	1.31
	50	12	0.46	1,488	92	1.06	98	1.23
	63	12	0.36	1,926	118	1.07	124	1.2
	80	12	0.27	2,528	152	1.07	158	1.17
	100	12	0.21	3,274	192	1.06	198	1.13
	125	12	0.17	4,068	242	1.08	248	1.14

- When ramping and helical milling, table feed, v_f (ipm) should be lower than 70% of the recommended cutting conditions.
- When helical milling, Max. pitch, DHmax should be lower than max. depth of cut, APMX.
- When ramping, the depth of cut should be lower than max. depth of cut, APMX.

- $L_{min} = APMX / \tan(RMPX)$ (mm)
- L_{min} : Min. length of ramping
- $APMX$: depth of cut Maximum
- $RMPX$: Max. rake angle in ramping

⚠ For the safe metalcutting

- Use safety supplies such as protective gloves to prevent possible injury while touching the edge of tools.
- Use safety glasses or safety cover to hedge possible dangers. Inappropriate usage or excessive cutting condition may lead tool's breakage or even the fragment's scattering.
- Clamp the workpiece tightly enough to prevent its movement while its machining.
- Properly manage the tool change phase because the inordinately used tool can be easily broken under the excessive cutting load or severe wear, and it may threat the operator's safety.
- Use safety cover because chips evacuated during cutting are hot and sharp and may cause burns and cuts. To remove chips safely, stop machining, put on protective gloves, and use a hook or other tools.
- Prepare for fire prevention measures as the use of the non-water soluble cutting oil may cause fire.
- Use safety cover and other safety supplies because the spare parts or the tools can be pulled out due to centrifugal force while high speed machining.
